

Action Plan: Evidence Integration & Project Finalization

Date: April 22 , 2026

Subject: Strategic Action Plan for Learning Outcomes and Group Deliverables

1. Personal Leadership (Learning Outcome)

Goal: Maintain current leadership trajectory while formalizing existing evidence.

- **Status:** Personal leadership approach remains the same. Sub-goals are defined but documentation is pending.
- **Action:** Consolidate all leadership-related notes outcomes.
- **Documentation:** Manually input the proof for each sub-goal into the portfolio. Ensure that even though the approach hasn't changed, the evidence of consistency is clearly visible.

2. End Product Proofs

Goal: Bridge the gap between feedback received and tangible evidence.

- **Status:** Feedback has been gathered, but the physical evidence (proofs) has not yet been integrated into the final project document.
- **Action:** Review feedback logs from stakeholders (e.g., Anke) and map them to product iterations.
- **Documentation:**
 - Upload final screenshots, benchmark data, and version comparisons.
 - Create a brief "Feedback-to-Result" summary for each product feature to demonstrate the evolution of the end product.

3. Group Project Improvement

Goal: Create a formal record of contributions and project enhancements.

- **Status:** Currently no entry or evidence for group project improvement exists.
- **Action:** Identify specific moments where project workflows, communication, or technical outputs were improved.
- **Documentation:**
 - Initiate a "Group Improvement Log" section.

- Add evidence such as version control logs, peer review notes, or refined project timelines to prove active involvement in group growth.

Next Steps & Priorities

1. Complete the **Group Project** section as it currently lacks any entries.
2. Batch-upload the **End Product** screenshots and benchmark results.
3. Finalize the **Personal Leadership** evidence entries to ensure all sub-goals are supported by the existing (but unfiled) data.
