

Third DL : DONE

On Monday and Tuesday, I will update ***my third decision log*** based on the feedback that I get from Anke:

- instead of creating another realising document, I will include it to my third decision log which is related to my test.
 - For my criterias I will updated them and make them measuarble.
 - For my research method I will include Workshop research.
 - For my observation I will include extra informations since I tested it.
 - I will also create a huge progress document which shows what I have done so far for this decision log step by step. It's my third feedbacks session for this decision log so it will be huge.
-

On Wednesday and Thursday, I will improve and update ***first and second my second decision log*** :

Firs DL : DONE

Project comparison:

- Add brief explanations for some of the projects so that I can show that some of the projects doesn't fit on my GenAI role.

Criterion 5:

- Replace "feeling more confident" with something measurable or remove it since it's a bit repetative.

Second DL : DONE

Evidence gap:

- **I will** add all necessary benchmark screenshots as actual evidence in the document.

Version comparison observation:

- I will show the specific numbers that led you to choose latest versions over older ones. The GPT-4o vs GPT 5.2 AIME 2025 gap for example.

Per-model reasoning:

- For each of the four models, write one concrete observation connecting a specific benchmark finding to why you chose that model.

Llama:

- Speed data from the leaderboard, plus the honest admission that it was an unfamiliar ecosystem you wanted to explore.

Claude:

- GPQA Diamond scores showing it consistently appears at the top across reasoning tasks.

GPT over Gemini: The "familiarity" criterion:

- Reason it better!
